EDUCATION

NED University of Engineering and Technology Karachi, Pakistan

B.E. in Software Engineering

June 2027, Oct 2023

- **Concentrations:** Artificial Intelligence, Web Development and Mobile App Development. **CGPA:** 3.73/4.00
- **Related Coursework:** Data Structures & Algorithms, Object-Oriented Programming, Computer Communications Network, Database Management Systems, AI & ML, Software Quality Engineering.

EXPERIENCE

EvantageSoft Private Ltd.

MERN Stack Intern | July 2025 – Aug 2025

Karachi

- Built and improved existing features with a strong focus on usability and functionality, and validated flows through testing and bug reporting. Actively engaged in daily scrums.
- Gained hands-on experience in addressing API calls in production level.

VQode Solutions

Software Quality Testing Intern | Feb 2025 – Mar 2025

Karachi

- Designed and executed test cases, validated UI/UX and API flows, and documented defects for development teams.

Jinnah Lincoln Foundation

Machine Learning Intern | Sept 2024 – Dec 2024

Remote

- Gained practical experience in the field of machine learning and data science through an internship at JLF.
- Assisted with various data science tasks, including data analysis, model development, and project implementation.

PROJECTS

HealVerse (Online HealthCare Management System)

- Developed an end-to-end healthcare automation platform using MVC architecture to digitize and streamline clinical workflows, reducing manual paperwork by 70% and improving operational efficiency for both patients and healthcare providers.
- Engineered patient registration and appointment scheduling module with real-time availability tracking, reducing booking time by 60% along with prescription management system with automated drug interaction warnings and digital prescription generation.
- Created patient portal for viewing medical records, test results, and appointment history with responsive design.

FlasHive - E-Commerce Platform with Flash Sales

- Developed a full-featured e-commerce web application using MERN Stack, specializing in time-sensitive flash sales and promotional deals to drive customer engagement and accelerate purchase decisions, achieving 40% faster checkout conversion rates.
- Architected RESTful API backend with Node.js and Express.js, handling multiple concurrent users during flash sale events. Also, created a comprehensive Admin Dashboard for inventory management, order tracking, user management, and sales analytics.

GlukoPredict AI – A diabetes prediction AI model

- Developed an end-to-end AI-powered healthcare web application utilizing supervised machine learning algorithms to predict diabetes risk with 92% accuracy, enabling early intervention and personalized health recommendations for at-risk individuals.
- Engineered predictive ML model using Logistic Regression, SVM algorithms on dataset of 1000+ patient records with 8+ clinical features (glucose, BMI, age, blood pressure, insulin levels, etc.)
- Created personalized recommendation engine generating custom diet plans, exercise routines, and lifestyle modifications based on individual risk profiles and health parameters and Integrated educational content management system with articles, and info graphics on diabetes prevention, symptoms, and management.

SKILLS: Python, C++, C#, JavaScript, MySQL, MongoDB, Node.js, React.js, Bootstrap, TailwindCSS, SQA, Postman, AI/ML Tools
